

Sustainable Construction

What is it? Sustainable is meeting the needs of today without compromising the needs of our future generations. Northland Buildings strives to apply this principle by utilizing materials and methods of construction that use less energy, cause less pollution and less waste while still providing the strength, durability and affordability of post-frame construction.

Energy Efficient

We use efficient insulation, windows and doors purchased from local businesses, carefully crafted to meet energy standards.

Low Maintenance Steel

The steel used in Northland buildings is durable, strong, low maintenance, and long-lasting. New steel has 25-35% recycled content, and is 100% recyclable at the end of its useful life.

Lumber and Building Materials

We use lumber that is engineered to meet the strength and specifications of the industry. We work with responsible lumber suppliers to ensure lumber is from sustainable and renewable forests that practice ethical land stewardship. Northland Buildings uses building products made from recycled materials whenever possible, helping to reduce solid waste problems and save on natural resources.

Minimize Waste

We strive to order the correct amounts and lengths of our building materials so that waste is kept minimal. Our warehouse is centrally located to help save on shipping costs.

Communication

Our sales and engineering staff are trained to obtain all the information needed to make the building process move smoothly and efficiently.

Craftsmanship

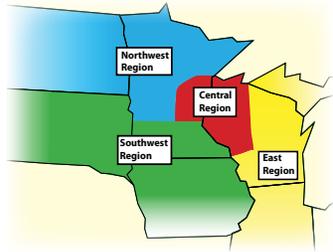

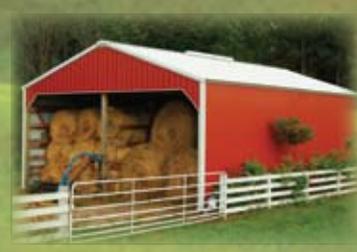

Our builders are local crews that take pride in their work. They are committed to providing quality workmanship for their neighbors and communities.

Commitment

We are committed to providing the best quality and value, keeping in mind the environmental impact and sustainable value of our buildings and the satisfaction of our customers.

We build residential garages, storage buildings, agricultural buildings, commercial and industrial buildings

Quality buildings at a fair price
